

'APC' pivot closer

The 'APC' DED13-005 is a double action pivot closer. The pivot closer provides a smooth close with a hold open facility at 90°. Beyond this point the pivot closer becomes free swing. The closing action is reinstated when the door is pushed back into the closing zone.

Designed for use in doors where a double action closing function is required or where the ill or infirm run the risk of falling over and blocking an inward opening toilet or bathroom door.
